Phone: 551-500-3753 (cell)

Core Competencies

OS & IDEs: Windows; macOS; Linux; Ubuntu; Visual Studio; VS Code; Rider; Eclipse
Version Control & Artifacts: Git; Perforce; GitHub; Bitbucket; JFrog
Cloud & MLOps: AWS; SageMaker; Azure; GCP; Databricks; Unity Catalog; MLflow; Arize; Fiddler
Containers & Orchestration: Docker; Kubernetes; Helm; Kubectl; Terraform
CI/CD & Automation: Jenkins; CI/CD pipelines; Automated testing (Gauntlet; JUnit; MS C++ Unit Test)
ML, Data Science, APIs, and Frameworks: Machine Learning; Deep Learning (PyTorch; TensorFlow); Scikit-learn; NLP; Embedding Models; Vector Indexing; Flask; REST APIs; Postman; OpenAI; Anthropic Claude; Strands Agents; ADK Agents; LangChain; Model Registry; RAG (Retrieval-Augmented Generation); AI Guardrails; MCP Tools/Skills; Webex API Integration
Data, Visualization, and Development Lifecycle: Pandas; NumPy; Matplotlib; Seaborn; Tableau; Power BI; Streamlit; Agile; JIRA; OpsGenie; Miro
Programming Languages: C++; Java; C#; Python; JavaScript (Node.js; React); TypeScript; C; SQL; HTML/CSS; FlutterFlow

Work Experience

ADP: Parsippany, NJ (July 2024 - Present)

Software Engineer 2026 - Present
Associate Machine Learning Engineer and Data Scientist 2024 - 2026

- Built a proof-of-concept A2A (Agent-to-Agent) orchestrator on AWS Strands Agents that discovers independently deployed agents via agent cards and delegates tasks across them, establishing a multi-agent coordination pattern demoed to leadership.
- Built a Webex-integrated routing agent using intent detection and guided clarification to resolve documentation searches in real time, cutting ad-hoc support requests by 50%.
- Drove adoption of ADP's AI Studio, onboarding 200+ users over 4 months to self-service agent creation across Strands, ADK, and LangChain frameworks with MCP tool/skill integration, resulting in 160+ production agents.
- Led a team to deliver ADP's first secure RAG system, designing the end-to-end retrieval pipeline (chunking, embedding, vector indexing, generation) with automated PII scanning and governance-compliant session history; cut retrieval latency from minutes to under 3 seconds via a write-optimized staging index and improved chunking heuristics.
- Built an AI Playground dashboard with cost-anomaly alerting for 500+ users across regions, tracking prompts, token costs, guardrail events, and errors; improved guardrail accuracy 50%, reduced token spend, and proactively warned users.
- Implemented OpenTelemetry-based distributed tracing and automated evaluation pipelines in Arize across ML models, LLMs, and agent workflows, enabling real-time production diagnostics and EU AI Act compliance.
- Own deployments of AI platform services (headless orchestrator, telemetry bridge, etc.) across DIT/FIT, IAT, UAT, and PROD via YAML manifests and a versioning timeline; release gates (version matching, upper-env promotion before PROD) prevent ~3 rollbacks/week.
- Automated the CI/CD pipelines for enterprise ML/LLM model registration and deployment, cutting registration/deployment time 40%+ and supporting 100+ biweekly production releases across teams.
- Built a reusable SageMaker deployment template (Python, Terraform, Jenkins) adopted by 10+ teams, boosting delivery efficiency 55%+.
- Revamped Databricks AI Playground pipelines to manage the full model lifecycle for 20+ active models, and migrated 300+ models into Unity Catalog to strengthen governance and accelerate deployment cycles.
- Deployed fully air-gapped platforms with Docker, Terraform, EKS, Helm, S3, IAM and implemented VPC/EKS separation, image transfer flows, and OpsGenie alerts.

Amplifier Game Invest: Stockholm, SE (September 2023 - January 2024)

Contractor Junior Game Programmer and Game Designer (ABC)

- Engineered gameplay systems in Unreal Engine 5 (C++ and Blueprint) and directed design and documentation for puzzles, levels, and enemy AI, applying performance-focused best practices.
- Built and maintained data-driven balancing spreadsheets to analyze and fine-tune game balance.

Curtail Inc.: Anaheim, CA (June 2023 - August 2023)

Software Engineering Intern

- Researched HTTP/2 and gRPC and reworked the company's existing C++ networking architecture to support both protocols.
- Led the framework's migration to HTTP/2 and gRPC, partnering with the development team on integration and applying protocol best practices to optimize network performance.

Warner Bros. Games: Burbank, CA (June 2022 - August 2022)

Software Engineering Intern

- Spearheaded the development of an automated testing framework for Unreal Engine 4 integration with internal game management infrastructure. Collaborated with team members and company branches, overseeing the pipeline and version control through Perforce.
- Created and was solely responsible for a full-stack plug-in for Unreal Engine 4 using C++ to analyze demo software for copyright infringement by comparing screenshots, achieving 100% accuracy.
- Wrote unit tests using C++ and assessed them with ImGui, Gauntlet, and the created automated unit testing framework.
- Delivered features in an Agile environment using JIRA, sprints, and Kanban across the full software development life cycle.

Education

Rensselaer Polytechnic Institute **Graduation: May 2024**
Bachelor of Science in Computer Science and GSAS (Games and Simulation Arts and Sciences) GPA: 3.36
