Phone: 551-500-3753 (cell)

Core Competencies

OS & IDEs: Windows; macOS; Linux; Ubuntu; Visual Studio; VS Code; Rider; Eclipse
Version Control & Artifacts: Git; Perforce; GitHub; Bitbucket; JFrog
Cloud & MLOps: AWS; SageMaker; Azure; GCP; Databricks; Unity Catalog; Mlflow; Arize, Fiddler
Containers & Orchestration: Docker; Kubernetes; Helm; Kubectl; Terraform
CI/CD & Automation: Jenkins; CI/CD pipelines; Automated testing (Gauntlet; JUnit; MS C++ Unit Test)
ML, Data Science, API's and Frameorks: Machine Learning; Deep Learning (PyTorch; TensorFlow); Scikit-learn; NLP; Embedding Models; Vector Indexing, Flask; REST APIs; Postman; OpenAI; Anthropic Claude; Arize; Fiddler; Strands Agents, ADK Agents, Langchain, Model Registry; RAG (Retrieval-Augmented Generation); AI Guardrails; Unity Catalog; Azure; MCP Tools/Skills; Webex API Integration
Data, Visualization, and Development Lifecycle: Pandas; NumPy; Matplotlib; Seaborn; Tableau; Power BI; Streamlit, Agile; Git; JIRA; OpsGenie; Miro
Programming Languages: C++; Java; C#; Python; JavaScript (Node.js; React); TypeScript; C; SQL, HTML/CSS, Flutterflow

Work Experience

ADP: Parsipanny, NJ (July 2024 - Present)

Software Engineer 2026 - Present
Associate Machine Learning Engineer and Data Scientist 2024 - 2026

- Built a Webex-integrated routing agent using intent detection and guided clarification to resolve documentation searches in real time, cutting ad-hoc support requests by 50%.
- Onboarded 200+ users to ADP's AI Studio over 4 months, enabling self-service agent creation across Strands, ADK, and LangChain frameworks with MCP tool/skill integration — driving creation of 160+ production agents.
- Automated the CI/CD pipelines for enterprise ML/LLM model registration and deployment, cutting registration/deployment time 40%+ and supporting 100+ biweekly production releases across teams.
- Implemented Arize observability with OpenTelemetry-based tracing across ML models, LLMs, and agent workflows, enabling real-time production diagnostics and compliance with the EU AI Act..
- Built a dynamic AI Playground dashboard tracking prompt volume, token costs, guardrail events, and error patterns for 500+ users across multiple regions.
- Revamped Databricks AI Playground pipelines to manage the full model lifecycle for 20+ active models, and migrated 300+ models into Unity Catalog to strengthen governance and accelerate deployment cycles.
- Led a team to deliver ADP's first secure RAG system, designing the end-to-end retrieval pipeline (chunking, embedding, vector indexing, generation integration) with automated PII scanning and governance-compliant document/session history.
- Cut RAG retrieval latency from minutes to under 3 seconds by introducing a write-optimized staging index and improved chunking heuristics.
- Deployed fully air-gapped platforms with Docker, Terraform, EKS, Helm, S3, IAM and implemented VPC/EKS separation, image transfer flows, and OpsGenie alerts.
- Built a reusable SageMaker deployment template (Python, Terraform, Jenkins) that boosted delivery efficiency 55%+

Amplifier Game Invest: Stockholm, SE (September 2023 - January 2024)

Contractor Junior Game Programmer and Game Designer (ABC)

- Implemented flexible full-stack code in Unreal Engine 5 using C++ and Blueprint, utilizing software best practices to ensure performance.
- Utilized data analysis skills to create and maintain spreadsheets for fine-tuning game balance,
- Directed documentation and implementation of game mechanics and game design, including puzzle design, level design, and enemy AI.

Curtail Inc.: Anaheim, CA (June 2023 - August 2023)

Software Engineering Intern

- Conducted in-depth research on HTTP/2 and gRPC to enhance the company's technical capabilities, reworking existing C++ architecture.
- Led in migrating the existing framework to support HTTP/2 and gRPC protocols seamlessly.
- Collaborated with the development team to ensure the successful integration of HTTP/2 and gRPC into the project.
- Contributed to the optimization of network performance through the implementation of HTTP/2 and gRPC best practices.

Warner Bros. Games: Burbank, CA (June 2022 - August 2022)

Software Engineering Intern

- Spearheaded the development of an automated testing framework for Unreal Engine 4 integration with internal game management infrastructure. Collaborated with team members and company branches, overseeing the pipeline and version control through Perforce.
- Created and was solely responsible for a full-stack plug-in for Unreal Engine 4 using C++ to analyze demo software for copyright infringement by comparing screenshots, achieving 100% accuracy.
- Wrote unit tests using C++ and assessed them with ImGui, Gauntlet, and the created automated unit testing framework.
- Attained proficiency in agile development and the software development life cycle, employing tools such as JIRA, sprints, kanban, etc.

Education

Rensselaer Polytechnic Institute **Graduation: May 2024**
Bachelor of Science in Computer Science and GSAS (Games and Simulation Arts and Sciences) GPA: 3.36
